A Mathematician's Lament, often referred to informally as Lockhart's Lament, is a short book on mathematics education by Paul Lockhart, originally a research mathematician at Brown University and U.C. Santa Cruz, and subsequently a math teacher at Saint Ann's School in Brooklyn, New York City for many years. This strongly worded opinion piece is organized into two parts. The first part, "Lamentation", criticizes the way mathematics is typically taught in American schools and argues for an aesthe

A Mathematician's Lament - Wikipedia

Lockhart's lament is a acerbic condemnation of the way that schools, by way of their institutional DNA, come to distort all that is important and powerful within humanity's greatest achievements. A much-needed spotlight on educational folly.

Lockhart's Lament [no longer available] rails against the way mathematics is taught in too many schools — as a rigid system of mindless algebraic rules with little meaning and very little beauty. It's by Paul Lockhart who has been a math researcher as well as a K-12 math teacher. The opening paragraph caught my attention immediately:

The book is a lament because the author believes that school mathematics essentially destroys the creative aspects of mathematics. Since mathematics is art, he argues, it is more than the memorization of definitions, formulas, and algorithms and should therefore be taught in a way that encourages exploration and discovery.

A Mathematician's Lament

Prof. Lockhart laments this absence. Even very talented mathematicians, once in the school system, find it very difficult to introduce students to the fascinating, beautiful "why" questions and explorations of mathematics. This is common throughout the school system in the U.S. at every level, not just in grades K-12.

A Mathematician's Lament is a rant. The author, Paul Lockhart, was a research mathematician but changed careers to be a K-12 (for non-US readers: childhood through pre-collegiate education) math teacher.

Review: A Mathematician's Lament by Paul Lockhart

Lockhart's argument is that without expecting a student to be familiar with everything that has been developed in mathematical thinking during the past 3,000 years, it would at least make sense to introduce students to the various areas of the subject by way of exploration; by way of playing games and looking at maths as something to enjoy and experience without artificial exercises.
