A Spatial Analysis Of Population

This study assessed the spatial distribution of population growth of Marinduque, an island province in the heart of the Philippines. Based on the results, population of the province varies across time and space while densely populated areas are concentrated in coastal, flat and relatively flat regions.

In a more restricted sense, spatial analysis is the technique applied to structures at the human scale, most notably in the analysis of geographic data. Complex issues arise in spatial analysis, many of which are neither clearly defined nor completely resolved, but form the basis for current research.

Population density (in agriculture: standing stock and standing crop) is a measurement of population per unit area, or exceptionally unit volume; it is a quantity of type number density. It is frequently applied to living organisms, most of the time to humans. It is a key geographical term. In simple terms, population density refers to the number of people living in an area per square kilometre.
