Several abiotic stresses are united by the fact that at least part of their detrimental effect on plant performance is caused by disruption of plant water status. This can occur through decreased availability of water in the environment during drought, altered ion content and water uptake caused by salinity or cellular dehydration caused

Abscisic acid (ABA) signalling is mainly involved in plant responses to abiotic stresses, such as the cold, drought, and high salinity [16] [17]. However, ABA also acts as a modulator of defence responses against pathogens, both positively and negatively, with its negative role being more prevalent [18] [3] [19] [20] [4] [21] [5] [22].

Abiotic Stresses Antagonize the Rice Defence Pathway ...

Plants are constantly exposed to changing environmental conditions that, when extreme, can cause plant stress. Soil salinity is a common abiotic stress occurring in arid and semi-arid regions and negatively affects crop yield.
