Laplace Transform Schaum Series Solution

Then the Laplace transform of $F(t)$, denoted by $\mathcal{L}\{F(t)\}$, is defined by $\mathcal{L}\{F(t)\} = \int_0^{\infty} f(s) e^{-st} F(t) dt$ (1) where we assume at present that the parameter s is real. Later it will be found useful to consider s complex. The Laplace transform of $F(t)$ is said to exist if the

Laplace transform is yet another operational tool for solving constant coefficients linear differential equations. The process of solution consists of three main steps: The given "hard" problem is transformed into a "simple" equation. This simple equation is solved by purely algebraic manipulations.

Uniqueness of inverse Laplace transforms. The Laplace transform of a null function $N(t)$ is zero. A consequence of this fact is that if $L[F(t)] = f(s)$ then also $L[F(t) + N(t)] = f(s)$. From this it
