Securing Web Services with WS-Security: Demystifying WS ...

Web Services Security (WS Security) is a specification that defines how security measures are implemented in web services to protect them from external attacks. It is a set of protocols that ensure security for SOAP-based messages by implementing the principles of confidentiality, integrity and authentication.

Web Services Security (WS Security) - Definition from ...

Most of the common web service frameworks support the "WS-Security" standard right away, for example Apache CXF. In the following, a check list with configuration best practices that will help to develop and configure secure web services will be presented. The configuration in general aims to achieve the following four main goals:

Security Best Practices: Web Services - WS-Attacks

The XwsSecurityInterceptor is an EndpointInterceptor (see Section 5.5.2, "Intercepting requests - the EndpointInterceptor interface") that is based on SUN's XML and Web Services Security package (XWSS). This WS-Security implementation is part of the Java Web Services Developer Pack . Like any other endpoint interceptor, it is defined in the endpoint mapping (see Section 5.5, "Endpoint mappings"). This means that you can be selective about adding WS-Security support: some endpoint ...

Chapter 7. Securing your Web services with Spring-WS

There was no particular standard for Web Service security (WS-Security) until April 2004, and Web service developers had to rely on the transport layer to provide security (via SSL/TLS from HTTP) or develop their own custom security mechanism sacrificing interoperability in the process.

WS-Security: Secure Web services through SOAP Message ...

Oracle Web Services Manager (WSM) is designed to define and implement Web services security in heterogeneous environments, including authentication, authorization, message encryption and decryption, signature generation and validation, and identity propagation across multiple Web services used to complete a single transaction.

Understanding Web Services Security Concepts

This WS-Security implementation is part of the Java Web Services Developer Pack (Java WSDP). Like any other endpoint interceptor, it is defined in the endpoint mapping (see Section 5.4, "Endpoint mappings"). This means that you can be selective about adding WS-Security support: some endpoint mappings require it, while others do not.

Chapter 7. Securing your Web services with Spring-WS

Securing JAX-WS web services using message-level security Web Services Security standards and profiles address how to provide message-level protection for messages that are exchanged in a web service environment. Securing JAX-RPC web services using message-level security
